

Majd Salameh

Backend & Full-Stack Software Engineer

North | 050-855-9373 | majdsalameh9@gmail.com | LinkedIn: [majd salameh](#) | GitHub: [majdsalameh1211](#) | [Portfolio](#)

Summary

Backend Software Engineer specializing in **real-time systems**, **APIs**, and **data pipelines**. Built and deployed production systems for real clients, including a real-time CRM and automated ETL pipelines, handling concurrent workloads and scalable data processing using **Node.js**, **Python**, and **WebSockets**.

Experience

Freelance Software Engineer | November 2025 – Present

Real Estate Enterprise System — Website, CMS & CRM (live in production)

(Node.js | Express | MongoDB | Socket.IO | React | TanStack Query | JWT | Supabase | Docker | Railway)

- Built and deployed a full-stack real time enterprise system used daily by ~10 users, replacing Zoho and reducing tooling costs by 95%
- Architected role-based Socket.IO rooms with per-role notifications and automated Meta webhook lead ingestion (fetch → normalize → deduplicate → persist)

Real-Time Booking Platform — Client Interface & Owner Dashboard (Live in Production)

(Node.js | Express | MongoDB | Socket.IO | React | JWT | Supabase | Docker | Railway | Vercel)

- Built and deployed a full-stack booking system live across multiple businesses, replacing manual scheduling and third-party tools
- Engineered Socket.IO slot locking with disconnect cleanup, eliminating double-booking race conditions across concurrent users

Excel Data Pipeline (ETL) - Delivered

(Python | pandas | numpy | dataclasses)

- Built an ETL pipeline for clinical data processing, transforming encoded Excel datasets into structured Python objects for downstream ML inference
- Implemented full validation layer that replays transformations from raw source, ensuring 100% field-level accuracy

Projects

Event-Driven Microservices Orchestrator (EDR) (Node.js | TypeScript | Docker | WebSockets | Express)

- Built a container-based job orchestration engine for managing distributed job execution across isolated processes, using YAML-defined services, fork()-based process isolation, and file-backed durable queues
- Designed an event-driven architecture with lifecycle state machines (FSM), eliminating ambiguous state mutations across concurrent jobs
- Implemented resource-aware dispatch using real-time container telemetry, enabling safe parallel execution and preventing resource over-allocation

Technical Skills

Languages: JavaScript, TypeScript, Python, Java, C

Backend: Node.js, Express, REST APIs, WebSockets (Socket.IO), Microservices, Event-Driven Architecture

Databases: MongoDB, PostgreSQL

Cloud & DevOps: Docker, Railway, GCP, Git, CI/CD

Data & Pipelines: pandas, NumPy, ETL

Security: JWT, RBAC, Rate Limiting

Additional: React, Next.js, Tailwind CSS, PyTorch, TensorFlow, MediaPipe, OpenCV

Education & Certificates

- **B.Sc. in Software Engineering**, Braude College of Engineering | 2021 – 2025
- AI Solutions Developer, MATI for Industry Program | 2025
- Full Stack Development Track, IPC College | 2025
